

TECHNICAL DATA SHEET

Liquid Paraffin

Note: Liquid Paraffin (White Oil) is manufactured from highly refined base oils and is made of saturated paraffinic and cycloparaffinic hydrocarbons. What makes shiny different types of lipsticks and creams is white oil or liquid paraffin cosmetic grade. There is no smell. The use of liquid paraffin is in different medicine for lubricating and medical facilities. In addition for more simple usage industrial white oil (liquid paraffin) is different in color and odor with Cosmetic and Medical grades. But it has also vast usage in industry of shoe and leather polishes.

Specification	GRADES		
	INDUSTRIAL	COSMETIC	TEST METHOD
Flash Point °C	Min 200	Min 195	D 92
Density at 20°C	0.83-0.85 gr/cm3	0.8-0.85 gr/cm3	D 1298
Odour	Passed	Passed	-
Kinematic Viscosity 40 oC/ CST	18-20	16-25	D 445
Acidity or Alkalinity	Passed	Passed	-
Pour Point °C	-3	-3	D 97
Color	0.1-0.5 Y	0.1 Y	IP 17
